

BRAKE PAD BEDDING PROCEDURE

Before Bedding Brake Pads

Please be aware that if you are using a new set of Winmax Brake Pads with used/second-hand brake discs, the bedding procedure will take longer as the pad must clean the material deposited on the brake disc and create a new friction material layer. This process can be accelerated if you resurface the brake discs.

The Procedure

Correct brake bedding is essential to ensure maximum performance of the brake system. Correct bedding is achieved by slowly increasing the temperature of the discs and pads. **DO NOT** start heavy brake applications in the first phase of brake bedding as this excessive temperature can cause damage. Please take your time with the process to ensure pads are bedded before arriving at event.
